Adeniyi Oluwaferanmi

Web Developer

ferdar4444@gmail.com • **adeniyioluwaferanmi.vercel.app** • **github.com/dlert** • **x.com/cruise999_**

SUMMARY

Web developer and founder of Ferdar Limited. I build websites and apps with AI agents in the loop, from scoping and design through to deployment, and debug what breaks along the way. My final-year project, a face recognition attendance system, reached 98% validation accuracy. Currently deepening my backend and machine learning skills.

EDUCATION

B.Sc. Computer Science 2022 – 2026
Bowen University, Iwo, Nigeria

Senior School Certificate (SSCE)
Hallmark College, Ibadan, Nigeria

PROFESSIONAL EXPERIENCE

Ferdar Limited • Ibadan Sep 2026 – Present
Founder

- Run my product and client work through one company.
- Building Daily Loop, an AI-assisted productivity app for Android and iOS.

Private client • Freelance Jul 2026 – Sep 2026
Web Engineer

- Designed and built the website for a borehole drilling company: services, projects, how it works, reviews and a cost estimator.
- Added quote requests and a WhatsApp contact button so visitors can reach the business directly.

Great Brands Nigeria Limited Jul 2025 – Sep 2025
IT Support (SIWES)

- Provided IT support as part of my Students' Industrial Work Experience Scheme placement.

Independent • X, Substack
Web3 Writer

- Wrote about Web3 projects, mainly as threads on X, with longer pieces on Substack.

PROJECTS

Face Recognition Attendance System — final-year project

- **Stack:** Python • TensorFlow • Keras • FaceNet • OpenCV • scikit-learn • Google Colab
- Takes class attendance by recognising each student's face, replacing paper registers.
- Two-stage transfer learning on FaceNet: about 95% with frozen layers, then 98% validation accuracy after fine-tuning the deeper layers.
- Trained on 234 images of 23 students on CPU only; L2 regularisation, dropout and data augmentation held the overfitting gap to 0.01.
- 5.3 points above the 92.7% reported by Verma et al. (2024) for a comparable CNN-based system.

Daily Loop — AI productivity app (in development)

- **Stack:** React Native (Expo) • TypeScript • SQLite • Claude API
- You talk to an AI companion; what you've done becomes a journal entry and what you plan becomes a task with an alarm.
- Home dashboard with daily progress, next-up reminders with done and snooze, and a daily check-in.

SKILLS

Languages: JavaScript, TypeScript, Python

Web & Mobile: React, React Native, Expo, SQLite

Machine Learning: TensorFlow, Keras, OpenCV, scikit-learn, transfer learning

Tools: Git, GitHub, Vercel, Google Colab, AI coding agents, prompt engineering

Currently learning: backend development
